Since its introduction in 1976 as a treatment for chronic uremia, the number of patients maintained on CAPD (Continuous Ambulatory Peritoneal Dialysis) has been steadily increasing. The interactive nature of this form of dialysis has initiated a unique collaborative approach by health professionals; a patient's "care-taking team" may consist of a renal physician, nurse, technician, dietician and a social worker.

The diversity of professionals directly involved in peritoneal dialysis requires a central communication forum where research, new technologies and information can be shared. The purpose of **Peritoneal Dialysis International (PDI)** is to serve as such a forum. Known for its rapid publication of important new papers, the journal has helped to shape and influence peritoneal practices worldwide.

The Long-Awaited Link Between Research and Practice

JOURNAL OF APPLIED CARDIOLOGY

Editor-in-Chief: **Richard J. Bing, MD**, Director, Experimental Cardiology, Huntington Medical Research Institutes, Pasadena, CA

Co-Editors: **Heinrich Taegtmeyer**, University of Texas Health Science Center, Houston, TX
Richard Pasternak, M.D., Beth Israel Hospital, Harvard University, Boston, MA

Journal of Applied Cardiology now uses a typeset format—
that means about 50% more articles for JAC readers.

*“There has been concern expressed within the profession that the continuity between the clinic and research laboratory is experiencing some interruption and that the clinical aspects of cardiovascular medicine are becoming more mechanical and utilitarian and the research endeavors more isolated, with only theoretical impact on understanding and treating cardiovascular disease in the patient. Thus, the experimental and clinical aspects of cardiology have been moving farther apart. The purpose of the **Journal of Applied Cardiology** is the bridging of this schism.”*

Richard J. Bing, Editor-in-Chief

*“A new journal was needed which placed clinical cardiology in direct relationship to research and which would, therefore, be a unique contribution. Clinicians need to understand the basic physiology and pathophysiology underlying clinical studies and findings in order to allow them to reasonably assess the study and be able to use the information in diverse clinical settings. Furthermore, they would be interested as the information would be in a disease based format. Accordingly, the **Journal of Applied Cardiology**.”*

Aims and Scope

Now in its fourth volume, **Journal of Applied Cardiology (JAC)** has quickly developed an international reputation for preserving, encouraging and developing the vital link between the laboratory and the clinic. Readers have found the journal a key source for findings on the relationships between normal and pathologic function and the clinical manifestations of heart and vascular disease. JAC's aim is to integrate the clinical disease state with underlying basic principles. Take a look at some of the articles which have been published to date:

L. De Caprio, M. Papa, D. Acanfora, F. Gallucci, M. Cicatiello, V. Canonico, F. Rengo (Italy): Effects of Aging and Beta-Adrenergic Blockade on QT/QT₂ Changes Induced by Isometric Exercises.

Y. Satoh, H. Okayama, M. Keitoku, Y. Maruyama, T. Takishima (Japan): The Effect of Mg²⁺ on Isolated Human Coronary Arterial Contraction.

F. Hernandez, L.D. Fusilli, M. Pandya, V.K. Zbuzek, W.-H. Wu, T.J. Regan (USA): Ventricular Vulnerability in Chronic Smoking Model: Relation to Hormonal Responses.

K.T. Weber, J.S. Janicki, S.G. Shroff, R. Pick, C. Abrahams, R.M. Chen, R.I. Bashey (USA): Collagen Compartment Remodeling in the Pressure Overloaded Left Ventricle.
